Novel recombinant monoclonal antibody with 4010-hybridoma type specificity useful in diagnostic procedures, especially for detection of phosphotyrosine-containing proteins in a sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of a recombinant monoclonal antibody having 4G10 hybridoma type specificity. cDNA encoding the heavy chain was obtained by PCR amplification of 4G10 hybridoma cDNA. This heavy chain cDNA was cloned into a eukaryotic vector and, with a vector for the 4G10 light chain, was used to produce a secreted, functional recombinant monoclonal antibody in transfected mammalian calls. The recombinant antibody is useful for detecting the presence of phosphotyrosine-containing proteins in a sample, for use in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              including cancers, to identify cellular substrates for tyrosine kinases, for affinity purification of phosphotyrosine-containing proteins and for determining the tyrosine phosphorylation status of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               in diagnosis of a variety of diseases
                                                                                                                                                                                                                     The present sequence is the protein sequence for the heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           81.6%; Score 2083.5; DB 23; Length 454; 84.8%; Pred. No. 1.1e-127; tive 26; Mismatches 35; Indels 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Monoclonal antibody; antibody; 4G10; phosphotyrosine; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       one or multiple proteins in a given cell or tissue sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is the protein sequence for the heavy chain of a recombinant monoclonal antibody having 4G10 hybridoma-type specificity. The heavy chain has been amended by the addition of a histidine tag at the C-terminal end. CDNA encoding the amended heavy chain was obtained by PCR amplification of 4G10 hybridoma CDNA and by site-directed mutagenesis. This heavy chain CDNA was cloned into a eukaryotic vector and, with a vector for the 4G10 Hight chain, was used to produce a secreted, functional recombinant monoclonal antibody in transfected mammalian cells. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   biological/medical research, in diagnosis of a variety of diseases including cancers, to identify callular substrates for tyrosine kinases, for affinity purification of phosphotyrosine-containing proceins and for determining the tyrosine phosphorylation status of one or multiple proteins in a given cell or tissue sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           recombinant antibody is useful for detecting the presence of phosphotyrosine-containing proteins in a sample, for use in biological/medical research, in diagnosis of a variety of diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              81.6%; Score 2083.5; DB 23; Length 462; 84.8%; Pred. Fc-gamma-R1 may have the following residues replaced: 234, 235, 236 and 237; 235 by Glu, and at least one of the others by Ala. Those with altered binding affinity for Clq may have an altered CH2 domain in which one of the following residues of the heavy chain have been changed to a residue with a different side chain; 318 (changed to Val) 320 and 322 (changed to Gln). Those with altered lytic properties, as compared with unmodified Ab may have an altered CH2 domain where

```
The OK3T heavy chain sequence was deduced from the CDNA sequence isolated from a library prepared from OK3T producing cells. The library was screened with a probe complementary to a region in the mouse IgG2a constant domain region. The OK3T sequence was used in CDR-grafting experiments to prepare humanised antibodies.

A fragment of the heavy chain (VH + CH1) from the anti-snake small neurotoxin monoclonal antibody M(alpha)2-3 was PGR-amplified from hybridoma-derived CDNA using primers AAQ48039 and AAQ48040. A light chain fragment (VL + CL) was amplified from the same source using primers AAQ48041 and AQ48042. The two amplified fragments were inserted into the same vector; the H-chain fragment was inserted (in-frame) between codons of 7 of the phoA coding sequence and the L-chain fragment was inserted into a cassette which contained a phoA s-D sequence, a signal peptide and the first 6 codons of phoA. The cassette was positioned between the termination codon and

New immunoglobulin hybrid proteins - with immunoglobulin fragments linked to dimeric protein, for diagnostic or

93EP-0400323 92FR-0001505 construct is expected to to encode a hybrid protein comprising two identical Ab-derived units. The invention also covers hybrid proteins containing two different Ab-derived units (i.e. to produce bispecific antibodies). When a toxic protein is used in place of phoA, the hybrid molecules can be used as cell-targetting

therapeutic agents.

The sequences (AAO54651-52) show the light and heavy chain cDNAs of murine T84.12. The T84.12 antibody is directed against the tumour marker carcinoma embryonic antigen, and is useful for antigen - has murine variable and human constant regions, also DNA encoding it and transformed myeloma cells New chimaeric T84.12 antibody active against carcinoembryonic tumour imaging and immunotherapy.

The amino acid sequence given in the specification has been incorrectly identified as a nucleic acid sequence, therefore unacceptable characters have been represented as an 'N'.

The amino acid sequence given below has been derived from the cDNA, by the indexer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the present invention relates to an anti-Death receptor 4 (DR4) antibody. The antibodies of the invention are useful for inducing apoptosis in mammalian cancer cells such as colon cancer cells and for treating an immune-related disease in a mammal such as arthritis and autoimmune disease.

New bispecific antibody reactive with both T or NK cells and mailgnant B cells - also their humanised forms and hybridomas producing them, useful for treating or preventing leukaemia, Lymphoma and myeloma

Example 4; Fig 4e; 85pp; English.

XIXEXETETXXXXCCCCCCCCC

The humanised ID10 antibody heavy chain (AAW05829) includes a variable region (see also AAW05823) consisting of human R3.5HG heavy chain variable region framework and complementarity determining regions from the murine ID10 antibody specific for a 28/32 kba antigen found on the surface of malignant B-cells. It can be coexpressed with humanised ID10 light chain (see also AAW05828) in mammalian host cells. Bispecific antibodies can be constructed that include a first binding fragment comprising humanised M291 heavy and light chain variable regions (see also AAW05826, AAW05830), and a second binding fragment comprising humanised ID10 heavy and light chain variable regions (see also AAW05820, AAW05830), and a second variable regions. Such antibodies are reactive with both T or NK cells and malignant B cells, and have therapeutic and diagnostic

AAB81972 standard; Protein; 581 AA

The present invention describes an antibody, which can react specifically with gangiloside GD2, and is transplanted with a human type complementation-determining domain (CDR), or its fragments. The antibody and its derivatives are useful in diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplification of the invention. Human type complementation-determining domain transplanted antibody and derivatives against ganglioside GD2, useful in diagnosis and therapy of e.g. tumours, has low antigenicity, little side effects but potent Ganglioside; GD2; complementation determining region; CDR; antibody; Ganglioside GD2 specific antibody ‡elated protein SEQ ID NO: 31. It is optionally humanized and in the form F(ab')2, F(ab)', Fab, Fv, scFv or V-min, and is produced in transgenic animals or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antigen binding structure; complementarity determining region; CDR; CA55.1; colorectal cancer; tumor-associated antigen; hybridoma;

The invention describes a novel antibody which recognizes a tumour necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) receptor (DES (Located on chromosome 8p21-22). The antibody has apoptosis-inducing activity to a cell expressing DRS in vivo. It is also useful for preparing a therapeutic for selective apoptosis of abnormal or dysregulated cells, and for inhibiting cell proliferation in a cell, preferably a human breast, ovary, colon, haematopoietic, prostate, lymphatic, lung, glioma or liver cell. A therapeutic agent may also be administered e.g. paclitaxel, taxol or cyclohaximide. The antibody is used to treat an autoimmune disease, systemic lupus cartibody is used to treat an autoimmune disease, systemic lupus cartibody. Hashimoto's disease, rheumatoid arthritis, graft-versus-host disease, soldren's syndrome, corrolmmune haemolytic anaemia, sterility, myasthenia gravis, multiple calcingmune haemolytic anaemia, sterility, myasthenia gravis, multiple collerosis, Basedow's disease, insulin-dependent diabetes mellitus, cardiomyopathy, thankel antibody and after organ and numerous malitanesias, financias of line, processed translantation and numerous malitanesias, financias of line, processed translantation and numerous malitanesias.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      64 LEWLGVIWSGGD-TDYNAAFISRLSISKDNSKSQLFFKMNSLRATDTAIYYCARNRGDIY 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              monocional antibody. The CDNAS were incorporated into a Ti
plasmid vector, which was incorporated into A. tumefaciens.
The resultant plant expression vector was used to transform
tobacco plants, making them TWV resistant, the plants could
also be blofarmed for the prodn. of anti-virus antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 chains of an animal derived anti-tobacco mosaic virus (TMV)

using insect guts, partic. insect brush border membranes (BBMs), esp. corn rootworm, as antigen; immunising a donor animal with the antigen; isolating immunocompetent B cells from the immunised animal; fusing B isolating immunocompetent B cells from the immunised animal; fusing B isolating immunocompetent B cells from the immunised animal; fusing B cells with a tumour cell line; isolating the fused cells, culturing them and cloning positive hybrid cells; and screening the hybrid cells for prodn. of the required MAbs. The MAbs bind to the gut of a target insect bind to most bind to mammalian BBMs. The DNA sequence can be operably linked to a toxin moiety, esp. selected from e.g. Bacillus toxins, Pseudomonas exotoxin and phytolaccin, etc.. The Abs are useful for control of insect pests, e.g. Coleoptera, Diptera, Hymenoptera and Lepidoptera. The pesticidal compsn. is pref. applied to a plant, e.g.

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
